

# FUNCTIONAL SPECIFICATION DOCUMENT

WildEscape – Online Hotel Booking System

---

## 1. Introduction

### 1.1 Purpose

This document defines the functional requirements for two core features of the WildEscape system:

1. Room Search & Availability Checking
2. Room Reservation & Online Booking

This document serves as a reference for developers, system analysts, and testers prior to system development.

---

## 2. Application Overview

WildEscape is a web-based hotel booking system designed to allow users to:

- Search for available hotel rooms

- View room details
- Make online reservations
- Receive booking confirmation

The goal of the system is to provide a convenient, secure, and efficient hotel booking experience.

---

### 3. Scope of the Document

This document only covers the following features:

- Feature 1: Room Search & Availability
- Feature 2: Room Reservation & Online Booking

All other system functionalities such as admin management, reporting, cancellation, and refund processing are excluded from this specification.

---

# FEATURE 1: Room Search & Availability

---

## 4. Feature Description

The Room Search & Availability feature allows users to search for available rooms based on selected dates and guest information.

The system checks room availability in real-time and displays only rooms that are not booked for the selected date range.

---

## 5. Functional Requirements

### 5.1 Search Input

The system shall allow users to input the following information:

- Check-in date
- Check-out date
- Number of adults
- Number of children

- Room type (optional)

The user must click the “Search” button to submit the request.

---

## 5.2 Input Validation Rules

The system shall enforce the following validation rules:

- Check-in date must not be earlier than the current date.
- Check-out date must be later than the check-in date.
- Number of guests must not exceed room capacity.
- Required fields must not be left empty.

If validation fails, the system shall display a clear error message indicating the issue.

---

## 5.3 Availability Checking

The system shall:

- Check the database for existing confirmed reservations.
- Detect overlapping booking dates.

- Exclude rooms that are already reserved during the selected period.
- Display only available rooms that match the search criteria.

If no rooms are available, the system shall display:  
“No rooms available for the selected dates.”

---

#### 5.4 Display of Search Results

For each available room, the system shall display:

- Room Name
- Room Type
- Maximum Capacity
- Price per Night
- Brief Room Description
- “View Details” button
- “Book Now” button

Rooms shall be sorted by price in ascending order by default.

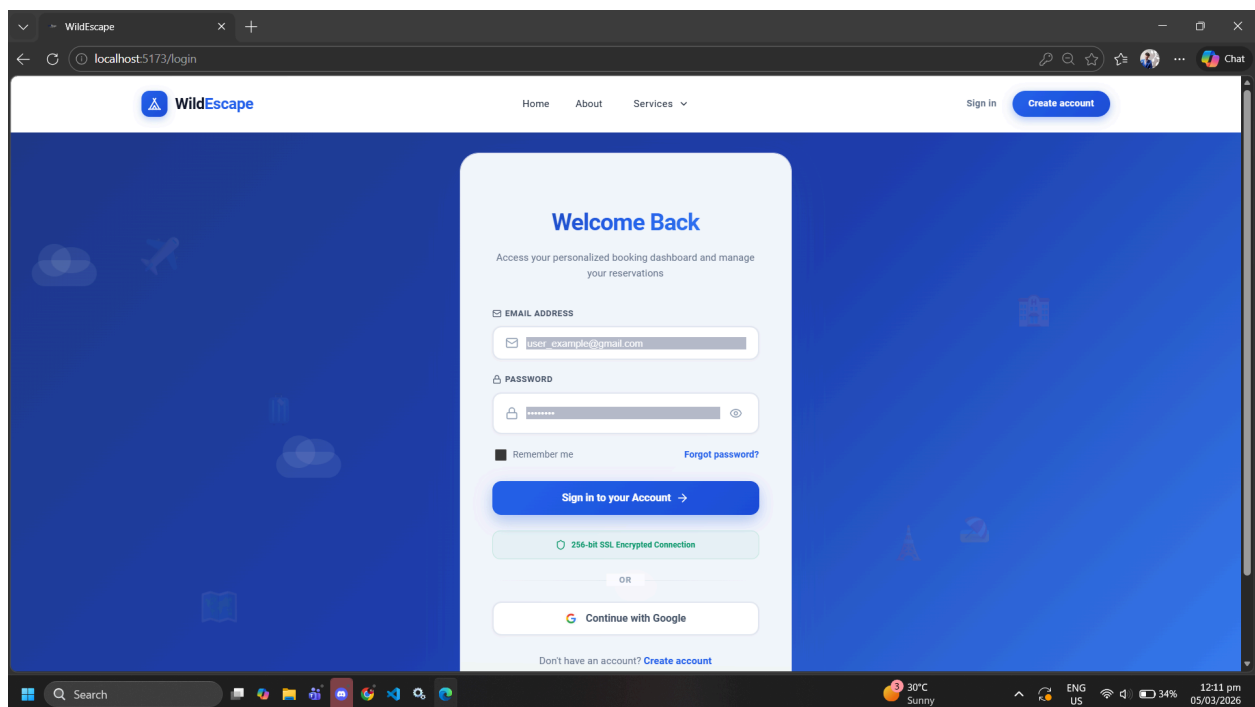

---

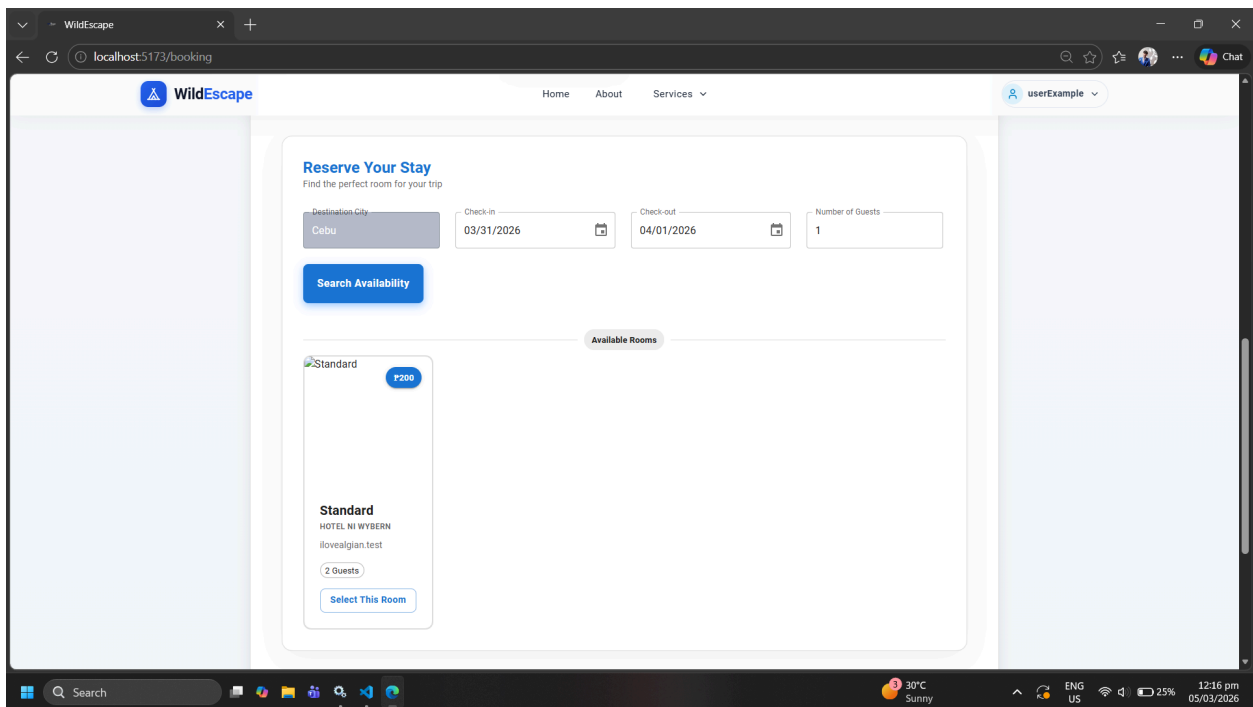

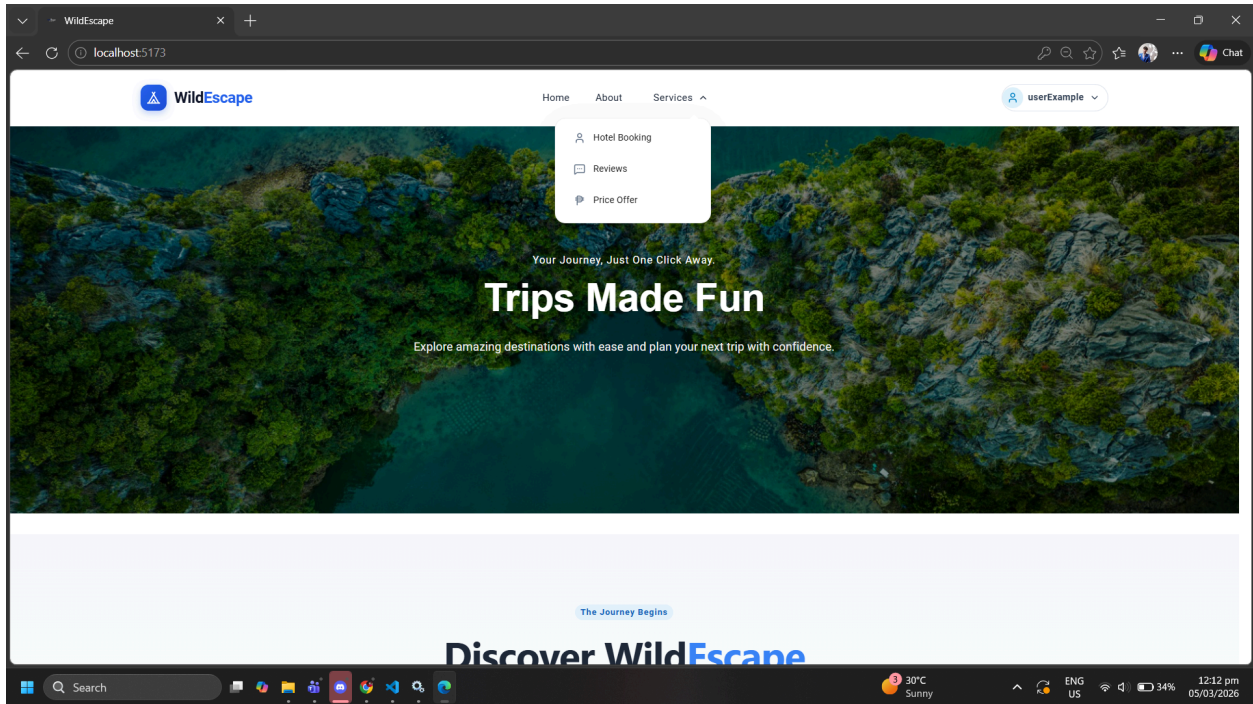

## FEATURE 2: Room Reservation & Online Booking

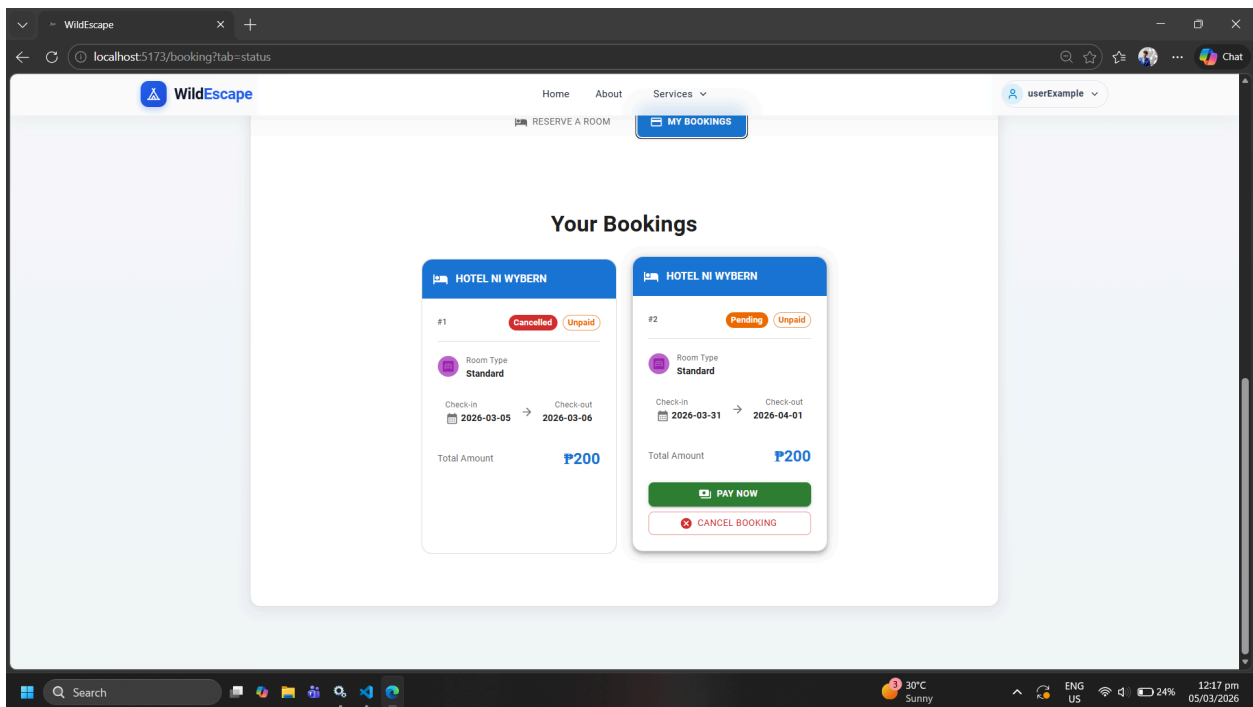

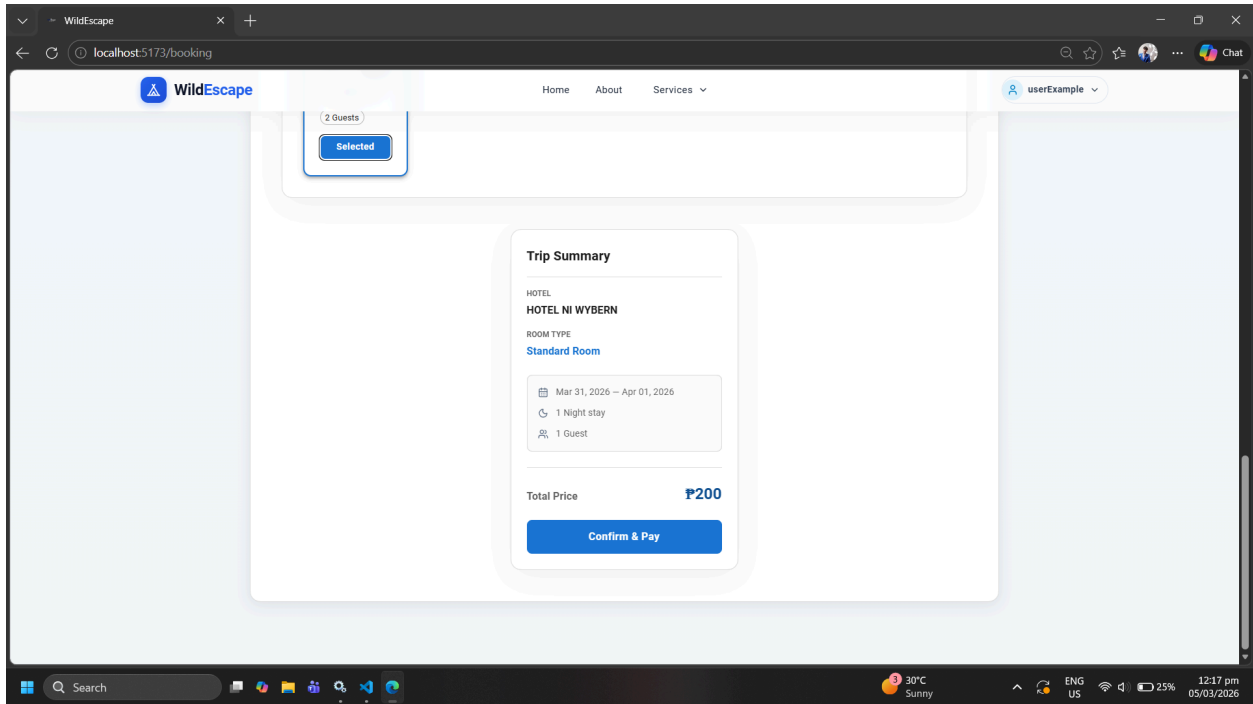

---

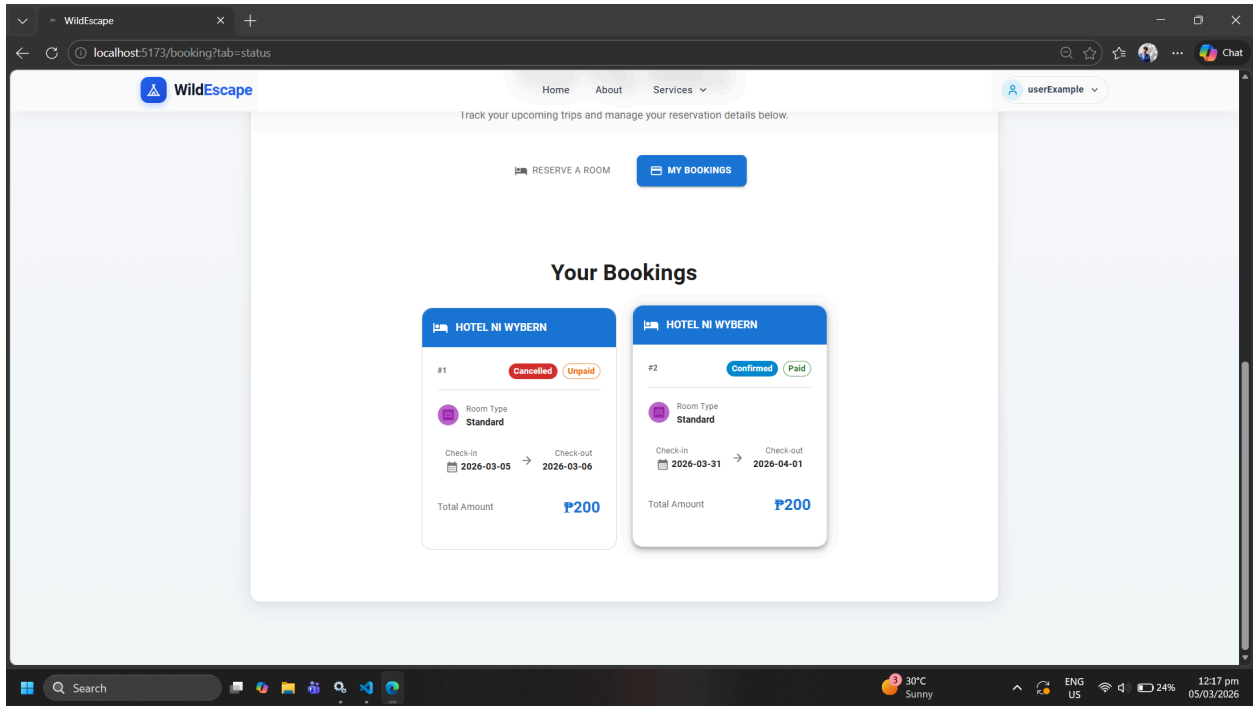

### 6. Feature Description

The Room Reservation & Online Booking feature allows users to reserve a selected room by completing a booking form and confirming their reservation.

## 7. Functional Requirements

### 7.1 Booking Form

When the user selects “Book Now”, the system shall display a booking form that includes:

- Full Name
- Email Address
- Contact Number
- Special Requests (optional field)

All required fields must be completed before proceeding.

---

### 7.2 Booking Summary

Before final confirmation, the system shall display a booking summary including:

- Room Type
- Check-in Date
- Check-out Date

- Number of Nights
- Price per Night
- Total Amount

Total Amount shall be calculated as:

Total Amount = Price per Night × Number of Nights

The number of nights shall be automatically computed by the system.

---

### 7.3 Booking Confirmation

When the user clicks “Confirm Booking”, the system shall:

- Save booking information in the database.
  - Update room availability records.
  - Generate a unique Booking Reference Number.
  - Set booking status to “Confirmed”.
-

## 7.4 Confirmation Output

After successful booking, the system shall display a confirmation page containing:

- Booking Reference Number
- Guest Name
- Room Type
- Check-in and Check-out Dates
- Total Amount
- Booking Status

The system may optionally send a confirmation email to the user's registered email address.

---

## 8. Non-Functional Requirements

- The system shall process search results within 3 seconds.
- The system shall secure user data using encryption.

- The system shall be accessible via modern web browsers.
  - The system shall be responsive for desktop and mobile devices.
  - The system shall operate under Philippine Standard Time.
- 

## 9. Assumptions and Constraints

- Users must have an active internet connection.
- Room availability depends on database accuracy.
- Payment processing integration is assumed but not covered in this document.
